Create a Search Box

These easy instructions will help you add a search box to your Web site. A search box is a perfect tool for navigation bars. If you want to create a search results page, you must use the [Create Search Results](#) tool instead.

STEP 1. Which search box looks best?

<input checked="" type="radio"/>	Pull-down	preview	customize
<input type="radio"/>	Badges	preview	customize
<input type="radio"/>	Standard	preview	customize

STEP 2. What is the URL of the page where results will be displayed?

You need to create your own Web page where the results can be displayed. You also need to add Jittersearch to that Web page with the [Create Search Results](#) tool. Type the URL of your search results Web page here. Then click the Update button.

results URL

STEP 3. Copy and Paste

Copy and paste the HTML code from the box below to your own Web page. Be sure to copy *everything exactly*.

```
<script src="http://my.jittersearch.com/import.js?username=h
```
